

Works

1. Complete HAL internship sincerely and document everything you learn.
2. Maintain a daily "Problems & AI Opportunities" notebook during HAL.
3. Select **one** project only:
 - AI-Powered Aerospace Technical Documentation Assistant
 - OR Aircraft Maintenance Knowledge Assistant
4. Spend 60–90 minutes daily on that project.
5. Revive DSA with only:
 - Arrays
 - Strings
 - Hashing
 - Two Pointers
 - Sliding Window
 - Binary Search
6. Study Operating Systems:
 - Processes
 - Threads
 - Scheduling
 - Deadlocks
 - Memory Management
7. Study Computer Networks:
 - TCP/IP
 - HTTP/HTTPS
 - DNS
 - TCP vs UDP
8. Learn SQL and DBMS fundamentals.
9. Keep improving Python.
10. Build a strong LinkedIn profile using your HAL experience.
11. Talk to engineers and employees at HAL whenever possible.
12. Start basic GATE preparation through:

- OS
- CN
- DBMS

14. Stop searching for new career paths every week.
15. Stop comparing yourself with friends who got placed.
16. Focus only on the next 45 days, not the next 5 years.
17. Sleep properly and protect your energy levels.
18. Finish one thing before starting another.
